CampusFind

LIVE TESTING EVIDENCE

Sai University | Web Technology and Internet Programming | 8 November 2026

Verification suite	Recorded outcome
Live API workflow	36 checks passed; 0 failed
Administrator/student smoke	12 checks passed; 0 failed
Live Postman collection (Newman)	26 requests; 29 assertions; 0 failures
Existing API/DOM regression CI	Passed again on the QA commit (33 tests)

Verified behaviour

Registration, login/logout, student/admin role checks, reports with image upload, exact-byte image retrieval, ownership rules, search filters, personal and incoming claim data, private claim scope, rejection, transactional approval and recovered status all passed on the deployed service.

Availability incident and correction

The first live run timed out after 90 seconds on /api/health, before creating any data. The current application commit was redeployed. Render confirmed the new deploy live, and the complete live suites then passed. The underlying cause of the initial unresponsiveness was not established; no application source-code defect was demonstrated.

Verification provenance

Live URL: https://campusfind-sai.onrender.com

Application commit: 3a46bcfb9adef9cd731bdf2524857ff58a18c15a
Recovery deploy: dep-dbo9ot95efls73d8lv4g
Successful run: https://github.com/poornachandra3217-glitch/Web_Tech_Final_Project/actions/runs/42497400267

Scope and remaining visual checks

The API checks verify the data used by dashboards. Authenticated dashboard screenshots and a physical mobile-device layout check remain separate work. Newman execution is real Postman collection evidence; it is not a screenshot of the Postman desktop application.

Synthetic reports and claim history are retained and labelled. No passwords, cookies, CSRF tokens or private claim evidence are included in this package.

Live workflow checklist

Independent GitHub runner | completed 2026-11-08T16:02:26.305Z

#	Check	Result
1	Live database health	PASS
2	Live frontend HTML served	PASS
3	Production security headers	PASS
4	Anonymous report denied	PASS
5	Invalid registration denied	PASS
6	reporter: registration creates student	PASS
7	claimant: registration creates student	PASS
8	stranger: registration creates student	PASS
9	Student denied administrator statistics	PASS
10	Missing CSRF token denied	PASS
11	Future report date denied	PASS
12	Multipart report and image created	PASS
13	Persisted image retrieved with exact bytes	PASS
14	Reporter updates own report	PASS
15	Another student cannot edit report	PASS
16	Keyword/category/building/type filters retrieve report	PASS
17	Student dashboard personal-listings data	PASS
18	Public detail excludes reporter credentials	PASS
19	Reporter cannot claim own item	PASS
20	Short claim evidence denied	PASS
21	Claim submitted	PASS
22	Duplicate claim denied	PASS
23	Uninvolved student cannot see private claim	PASS
24	Claimant cannot approve own claim	PASS
25	Reporter dashboard incoming request	PASS
26	Second synthetic claim submitted	PASS
27	Reporter rejects claim	PASS
28	Claimant dashboard displays rejection	PASS
29	Reporter approves transaction	PASS
30	Recovered item status persisted	PASS
31	Claimant dashboard displays approval	PASS
32	Recovered item cannot reopen	PASS
33	Reporter logout	PASS
34	Logout removes protected access	PASS
35	Existing registered user can log in again	PASS
36	Live Postman collection passes	PASS

Administrator and student verification

Separate private-credential smoke test | completed 2026-11-08T16:02:25.031Z

#	Check	Result
1	Administrator login and role	PASS
2	Student login and role	PASS
3	Student denied admin endpoint	PASS
4	Administrator statistics retrieved	PASS
5	Live multipart report created	PASS
6	Uploaded image retrieved intact	PASS
7	Recovery request submitted	PASS
8	Reporter sees incoming request	PASS
9	Reporter approves recovery transaction	PASS
10	Recovered item status persisted	PASS
11	Claimant receives approved status	PASS
12	Logout invalidates student session	PASS

Retained synthetic records

Record	Final state
QA LIVE notebook 1794153695077-528368	Recovered; one approved claim and one rejected claim
QA verification notebook	Recovered; approved claim
QA Postman verified blue backpack	Recovered by ordered Postman acceptance flow

Record identifiers

API workflow item: 6af09ceb77f95512ea18b236
Administrator smoke item: 6af09cfb77f95512ea18b23a
All records are assessment data, not real lost property. They remain in the live database to preserve the tested history.

Live Postman request results

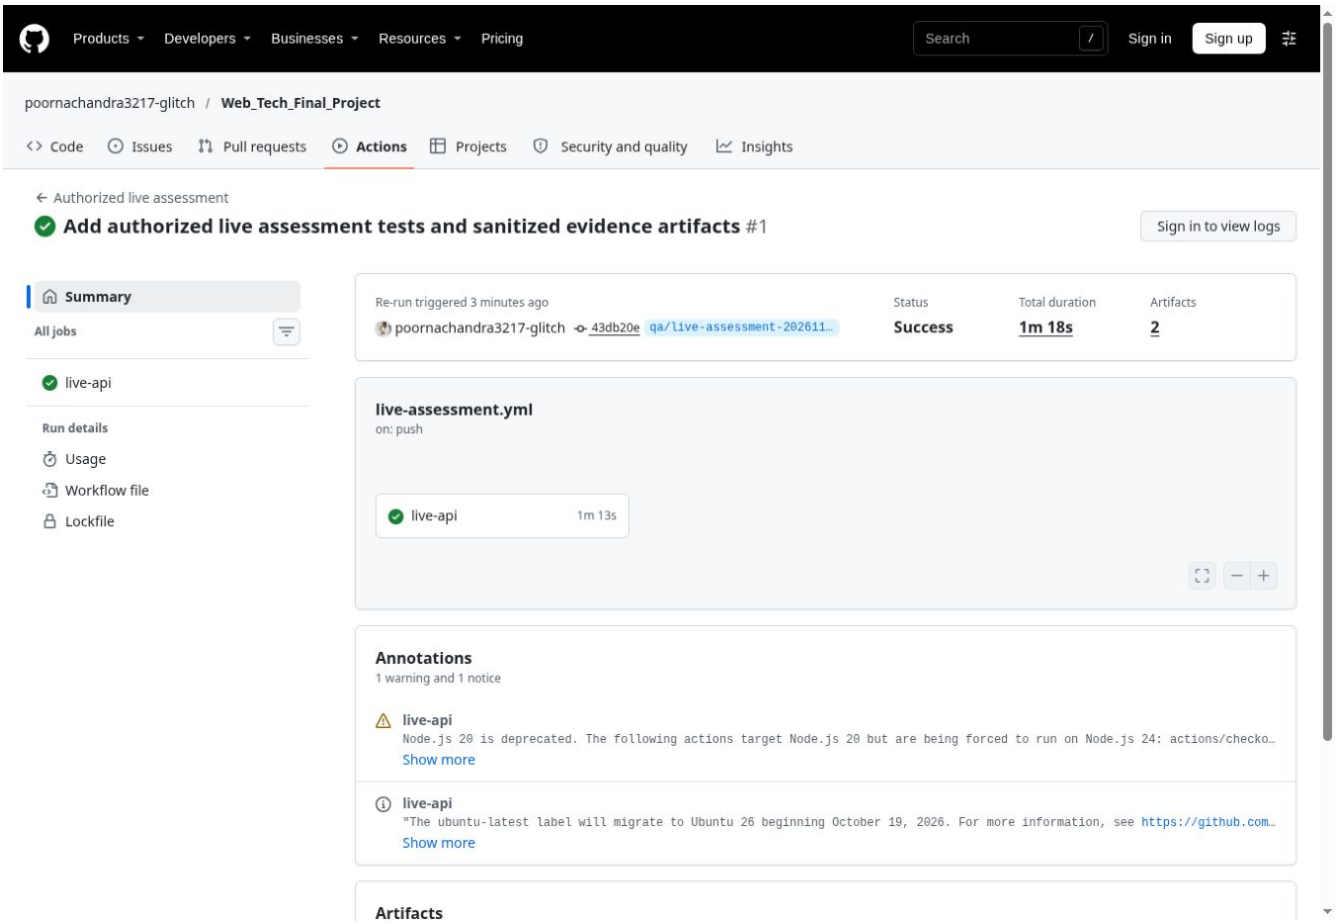

26 requests and 29 assertions passed. The table lists actual HTTP responses, including expected negative cases.

Request	Method	HTTP	ms	Assertions
01 Start session and get CSRF token	GET	200	310	1/1
02 Protected report rejects anonymous access	POST	401	334	1/1
03 Invalid registration	POST	400	869	1/1
04 Register reporter	POST	201	2666	1/1
05 Invalid listing validation	POST	400	400	1/1
06 Create found listing	POST	201	452	1/1
07 Retrieve item	GET	200	928	2/2
08 Search and filter	GET	200	446	2/2
09 Update item	PATCH	200	786	1/1
10 Self claim rejected	POST	400	464	1/1
11 Logout reporter	POST	200	639	1/1
12 New anonymous session	GET	200	618	1/1
13 Register claimant	POST	201	2441	1/1
14 Another user cannot update listing	PATCH	403	451	1/1
15 Submit claim	POST	201	514	1/1
16 Duplicate claim rejected	POST	409	901	1/1
17 Claimant cannot approve claim	PATCH	403	911	1/1
18 Student cannot access admin statistics	GET	403	594	1/1
19 Logout claimant	POST	200	384	1/1
20 New session for reporter	GET	200	276	1/1
21 Login reporter	POST	200	2701	1/1
22 Approve request as reporter	PATCH	200	785	1/1
23 Verify recovered status	GET	200	507	2/2
24 Preserve claim history on delete	DELETE	409	509	1/1
25 Mutation without CSRF is rejected	PATCH	403	313	1/1
26 Final logout	POST	200	380	1/1

Observed response mean: 791.5 ms; range: 276-2701 ms. This was one sequential functional run from GitHub, not a load test or availability guarantee.

Independent run: Success

GitHub Actions displays the successful live assessment run after redeployment.

Browser confirmation: Recovered

The deployed item detail shows the retained synthetic record as recovered. The uploaded test image is a one-pixel PNG used to verify byte persistence.
